SUMMARY

Informatics graduate with experience building end-to-end AI and data solutions across the FMCG and Oil & Gas industries. Delivered production-ready systems including a YOLO-based PPE detection model (mAP@50 >85%), a RAG-powered internal chatbot, ML models for GPM and OPI prediction across 19 production lines, and a report automation pipeline that cut manual effort from 2 hours to 5 minutes. Currently expanding expertise in enterprise ML platforms through Dataiku certification.

EXPERIENCE

PT GARUDAFOOD PUTRA PUTRI JAYA – SUMEDANG, INDONESIA

Data Analyst Intern

Oct 2025 – Apr 2026

- Developed end-to-end ML models to predict Gross Profit Margin (GPM) and Operation Performance Indicators (OPI) across 19 production lines, from data processing to web app deployment.
- Built "iGrow", an internal RAG-based knowledge management chatbot on n8n, covering full pipeline from data preparation to deployment.
- Designed an automated report system to extract data from Excel directly into PowerPoint presentations, reducing a manual process from 2 hours to just 5 minutes.

PT PERTAMINA EP ZONA 7 – CIREBON, INDONESIA

AI Engineer & Project Coordinator – Freelance Project

Feb 2025 – Jun 2025

- Implemented a real-time AI object detection system on operational CCTV to automatically monitor PPE compliance, utilizing the YOLO architecture trained on a custom dataset of 5,000+ images
- Managed the full AI model development lifecycle — from data collection and annotation to hyperparameter fine-tuning — achieving a detection accuracy of mAP@50 >85%.
- Led cross-functional team coordination and monitored the project timeline for an HSSE digitalization initiative, ensuring all milestones were delivered on schedule.

PT PERTAMINA EP REGIONAL 2 – JAKARTA, INDONESIA

Information Communication Technology intern

Jul 2024 – Sep 2024

- Conducted in-depth Exploratory Data Analysis (EDA) to map correlations between temperature, energy flow rate, and gas component variables, ensuring data quality prior to modeling
- Gas Developed a gas pipeline pressure prediction model using Deep Learning algorithms, designed as an early anomaly detection tool for the gas distribution system.
- Designed a model integration strategy into the Integrated Monitoring System (IMS) through collaboration with the operational team, supporting real-time asset monitoring digitalization initiatives

EDUCATION

TELKOM UNIVERSITY – BANDUNG, INDONESIA

Bachelor of Informatics |

Aug 2021 – Jul 2025

- **Final Thesis:** Gas Pressure Prediction in Dry Gas Distribution using the Gated Recurrent Unit Model.

CERTIFICATIONS

- Machine Learning Practitioner Certificate - Dataiku | 2026
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate - Oracle University | 2025
- Data Science & Artificial Intelligence - Independent Study Program (MSIB) Batch 6 | 2024

SKILLS

Technical:

- **Data Analysis:** Data Cleaning, Exploratory Data Analysis (EDA), Predictive Modeling
- **Programming & Tools:** Python (Pandas, NumPy), SQL, Flask, n8n (Workflow Automation), Excel, Power BI
- **Machine Learning & AI:** TensorFlow, Deep Learning, Computer Vision (YOLO), RAG (LLM)

Languages:

- English: Intermediate
- Indonesian: Native
